**MANAGE EVERYTHING.
ANYWHERE.**

01. BUSINESS OPERATIONS

Full Operational Control in Real-Time from anywhere

EMIKO brings all core business operations into a single platform.

Monitor, control and optimize daily activities across locations, devices and services, all from one centralized system.

01. BUSINESS OPERATIONS

Designer for real-world business operations

EMIKO is built for businesses that operate in real environments, not just dashboards.

From energy and water distribution to access control and on-site equipment, every operational layer is connected and visible in one place.

Operational visibility and control

Live status of devices and infrastructure

Remote control of connected equipment

Real-time usage across connected systems

Instant alerts for critical operational events

Automated workflows for daily operations

Reduced need for on-site interventions

02. MULTI-BUSINESS MANAGEMENT

Manage multiple businesses from one platform

EMIKO connects multiple businesses, locations and infrastructures into a single operational view.

Each business runs independently, while decision-making stays centralized and clear.

✓ **No duplicated systems.**

✓ **No separate logins.**

DESIGNED FOR GROWING ORGANIZATIONS

02. MULTI-BUSINESS MANAGEMENT

Complete control across multiple businesses

Businesses are structured separately by design.
Data, users and daily operations remain clearly isolated.

At the same time, everything is accessible from one platform, enabling oversight without added complexity.

Operational structure and oversight

One platform

Reduce system fragmentation and manage all businesses from one place.

Unified operational view

Save time with instant visibility across businesses, locations and services.

Advanced reporting

Make faster decisions with consolidated reports across all businesses.

Resource optimization

Allocate teams and operational resources where they are needed

BUILT TO SCALE WITH YOUR BUSINESS

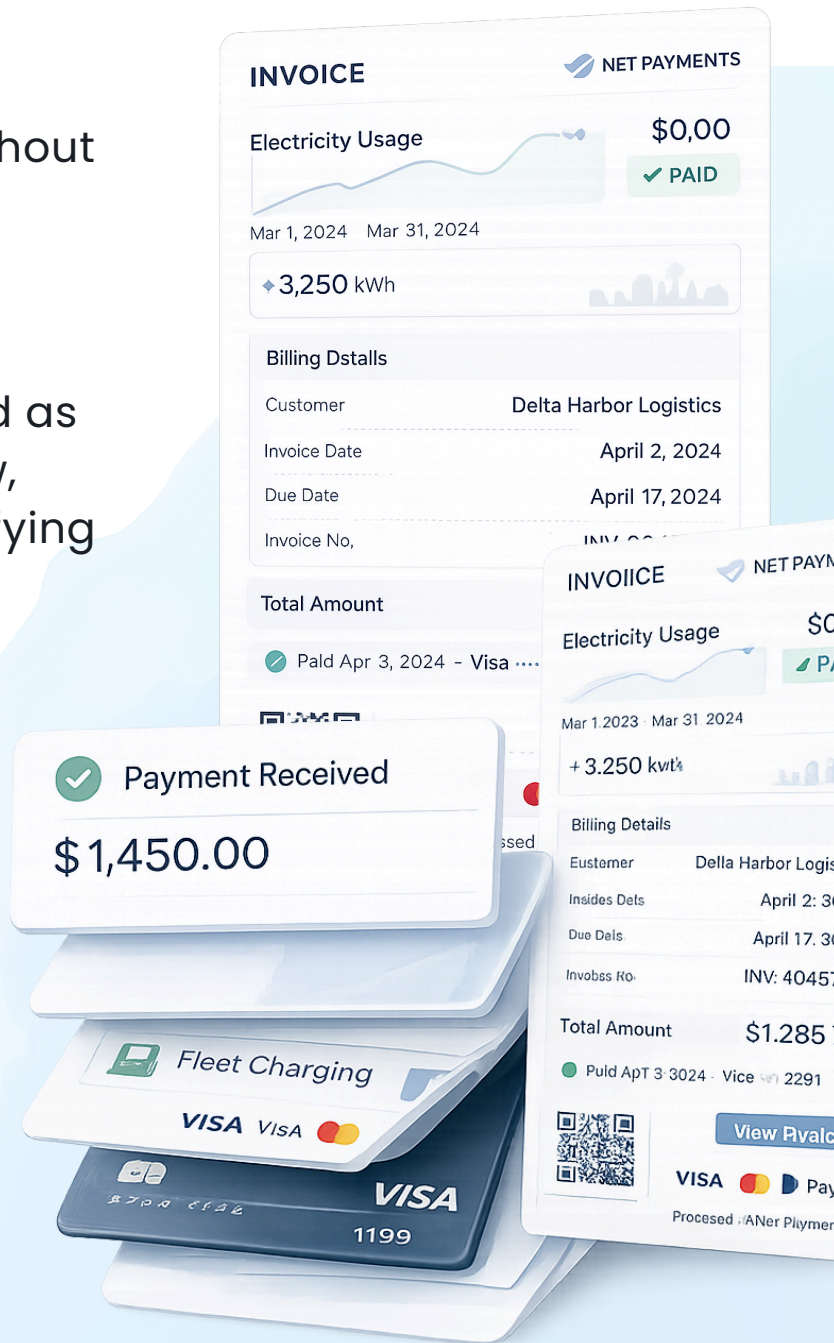

03. PAYMENTS & BILLING

Automated billing and payment flows

Billing and payments are handled automatically, without manual calculations or spreadsheets.

Invoices, charges and transactions are generated as part of the operational flow, reducing errors and simplifying financial management.

- ✓ **Usage-based billing**
- ✓ **Automated invoicing**
- ✓ **Integrated payment flows**

BUILT FOR TRANSPARENT FINANCIAL OPERATIONS

03. PAYMENTS & BILLING

Clear billing processes from start to finish

Manual billing creates delays, errors and unnecessary overhead.

With automated billing and payments, financial processes stay consistent, traceable and easy to manage, even as operations scale.

What this means for your business

Save time on administration

No manual calculations, exports or follow-ups.

Reduce billing errors

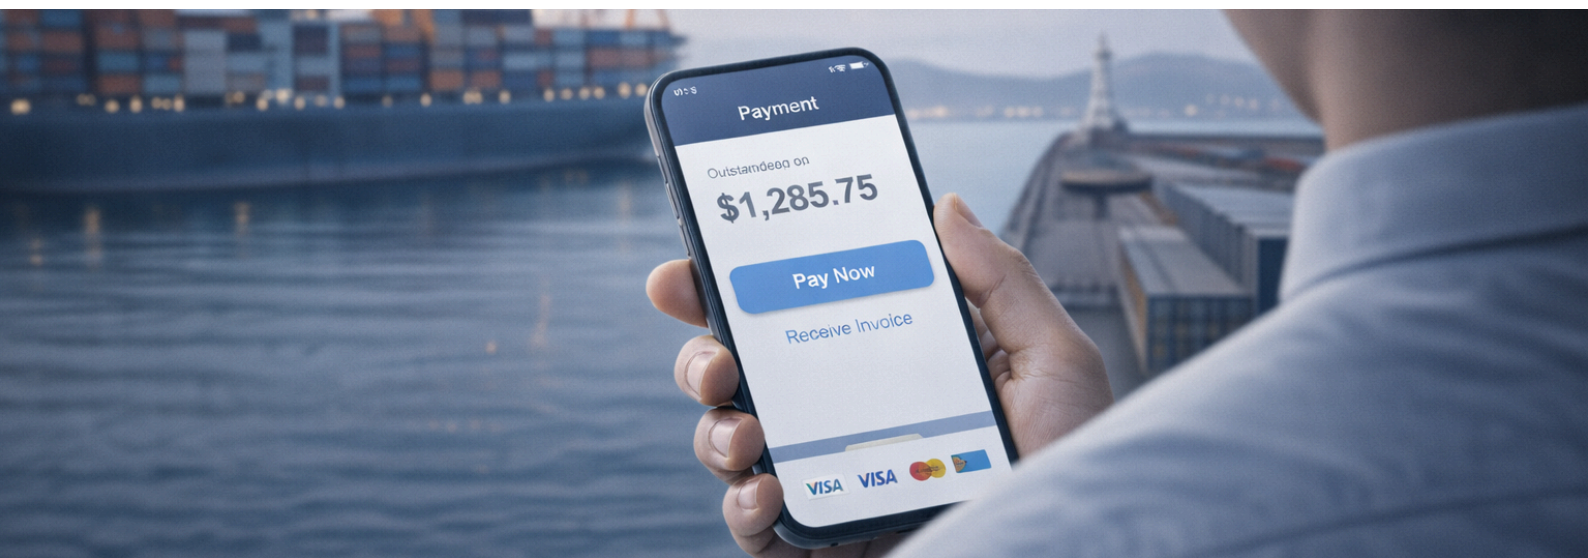

Automated processes remove human mistakes.

Advanced reporting

Everything is visible in one place.

Scales with operations

Billing stays structured as complexity increases.

04. CUSTOMERS EXPERIENCE

Simple experiences for every day customers

The customer experience is designed to be clear, fast and predictable.

With Emiko, customers access on-site services, usage information, and payments through one consistent digital flow.

Access, consumption, and payments are handled in one place.

BUILT FOR ON-SITE CUSTOMER SIMPLICITY

04. CUSTOMERS EXPERIENCE

Everything customers need, in one place

Emiko builds transparency and trust, allowing customers to operate with confidence, even in fast-moving business environments.

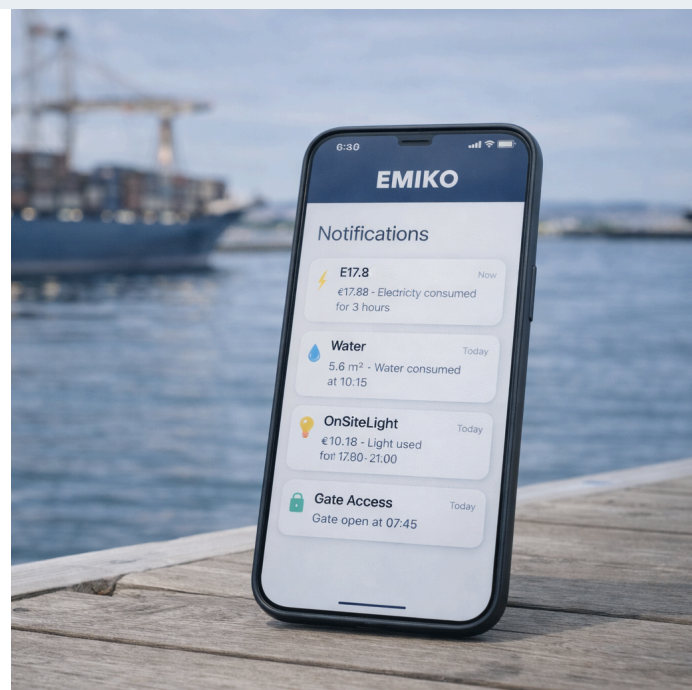

Instant access to on-site services

Customers can request and activate services such as electricity, water, lighting, or gate access directly from the app, without manual coordination or on-site assistance.

Clear consumption visibility

All usage is displayed in real time, allowing customers to clearly understand what they consume and when it happens.

04. CUSTOMERS EXPERIENCE

Access from any device

The customer app is available on mobile and web, allowing users to manage services on-site or remotely, without changing workflows or interfaces.

Real-time notifications and status updates

Customers receive instant notifications for service activity, consumption updates, and access events, ensuring constant awareness and control.

Consistent experience across locations

Whether accessing one harbor or multiple locations, the app follows the same structure and logic, making it easy to use everywhere.

04. CUSTOMERS EXPERIENCE

Scan & Go

Access starts with a scan

With EMIKO, accessing on-site services starts with a simple scan.

No forms, no instructions, just point the camera and follow the flow.

Scan to get EMIKO

If the app is not installed, scanning the QR code redirects to the app store.

After installation, users can quickly create an account using Google, Microsoft, or email and continue the flow.

Scan to get access

If access to the business is required, the app opens the approval request instantly and notifies the user once access is granted, without repeating the scan.

Scan to start service

If the user is already approved, the service opens directly in the app and can be started immediately.

05. TECHNOLOGY & INTEGRATIONS

From data to action

Integrations and automations

EMIKO transforms operational data into clear, usable information.

Everything is collected, processed, and delivered in real time, supporting informed decisions across daily operations.

Forecast data

EMIKO collects forecast and environmental data in real time and makes it available across the platform.

Information can be viewed, shared, or forwarded to other systems to support daily operations.

Forecast warnings

When conditions change or thresholds are exceeded, EMIKO generates automatic warnings.

Alerts notify operators early, allowing action before issues escalate.

05. TECHNOLOGY & INTEGRATIONS

Beyond the platform

Sharing & system integration

Operational data becomes valuable when it can be shared and automated.

EMIKO connects real-time information with external systems and business processes.

EasyShare

Weather information, service availability, and operational status can be shared through widgets or shared views, keeping customers and partners informed without direct platform access.

Oeconomia API

Oeconomia is EMIKO's integration layer for financial and ERP systems.

It enables automated invoicing, customer data synchronization, and structured data exchange, reducing manual work and ensuring consistency across systems.

DESIGNED FOR BUSINESS AUTOMATION

06. EMIKO PRODUCTS

What EMIKO can control and manage

Marine power pedestals

Remote control and metering for marina power pedestals.

Off-grid power systems

Remote off-grid power control with battery and solar monitoring.

Water stations

Controlled access and usage tracking for on-site water supply.

Weather stations

Real-time weather data collection, forecasting, and alert integration.

On-site lighting

Remote control and scheduling for area and infrastructure lighting.

Full lighthouse solutions

Integrated remote control for complete lighthouse installations.

Sector lights & PEL

Remote control for sector lights and precision entrance lighting.

Barriers and gates

Access control, logging, and automation for gates and barriers.

Shore power supply

High-capacity shore power monitoring and integration.

Energy consumption monitoring

Centralized monitoring of electricity, water, and heat consumption.

Liquid pumping systems

Liquid management system for pumps, tanks, and fluid distribution.

Water level monitoring

Water level monitoring for ports, coastlines, and infrastructure.

Bridge control lights

Monitoring and control of bridge lighting systems.

Complete lanterns programme

Management of navigational lanterns across multiple locations.

Leading lights

Full range of leading light systems with centralized supervision.

Signal control and monitoring

Signal control and monitoring for critical infrastructure and systems.
